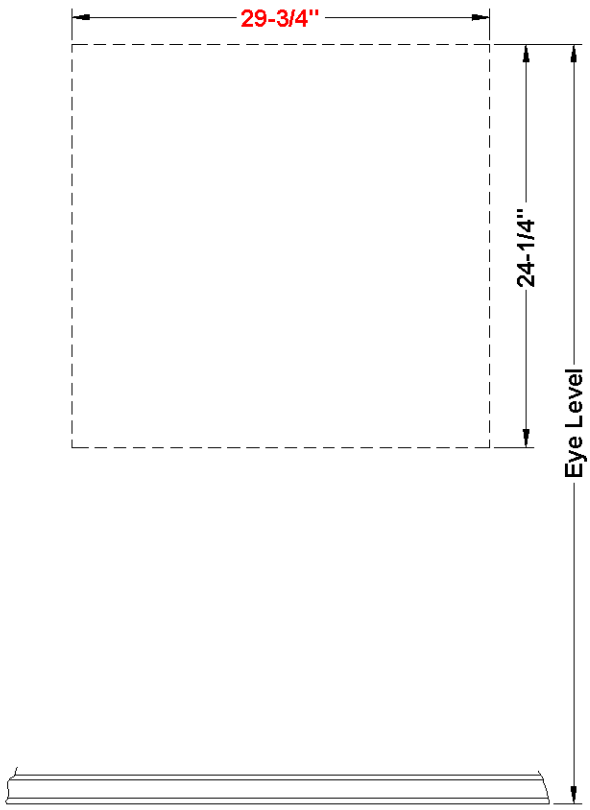

Figure 1 – Installation Measurements

3. Measure the wall and mark the location of the center of each of the three screw mounting holes. See Figure 2. Using the level, make sure that all three marks are level on the wall. It's highly recommended that the center wall anchor is inserted into a wall stud.

NOTICE

Make sure not to drill into electrical wiring or plumbing pipes.

5. Insert one of the furnished plastic anchors into each of the three ¼" holes. See Figure 3. Make sure that the wall anchor is flush with the wall.

   NOTE – It may be necessary to use a small hammer to gently tap the anchor into place.

6. Using the phillip head screwdriver, install one Phillip Head Screw into each of the anchors. See Figure 3. Turn the screw in until there is a gap of 1/4" between the head of the screw and the wall surface.

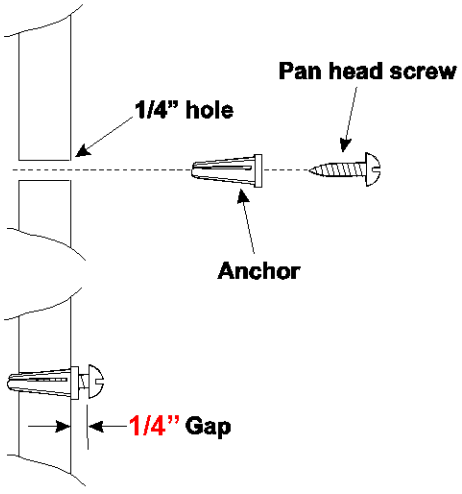

Figure 3 – Wall Anchor Installation

NOTICE

Using the level, check to make sure that the fireplace is horizontally level and vertically plumb (straight up and down).

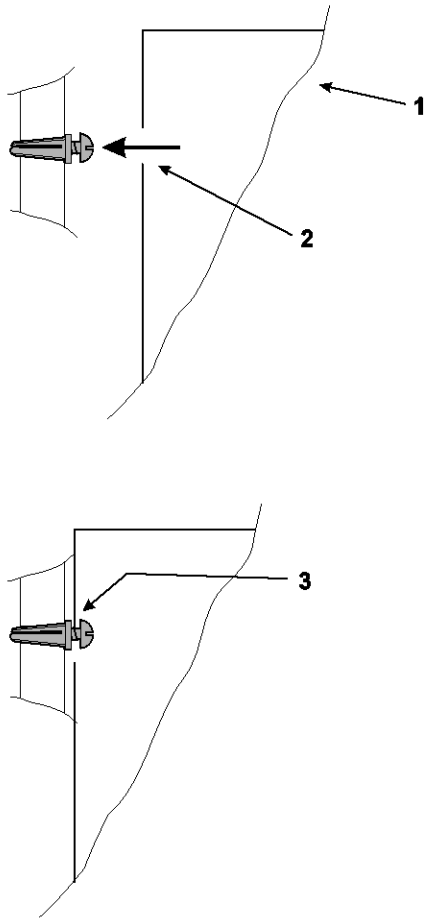

Figure 4 – Install Fireplace

8. Remove the three fuel canister holders (2, Figure 5) from the fireplace and install one gel fuel canister (1, Figure 5) into each of the holders.
